

Colostrum Comparison Chart

Professional Veterinarian Services Technical Bulletin

As you select a colostrum product for your calves, consider the following:

- Calves need 150-200 gm IgG for protection from failure of passive transfer (FPT).
- Colostrum-based products provide the best protection from failure of passive transfer (FPT).
- Calves do not absorb as much IgG from serum-based products, so you would need to use considerably more.

Please note: This information was gathered from the manufacturers' product labels. If you have further questions, please contact us.

Product	Manufacturer	Source	Fat Source	USDA Licensed	IgG Amount, g	Supplement/ Replacer	Additional Notes
